

Fast + Epp Home Office Vancouver, BC

Located at the corner of Yukon Street and 7th Avenue, Fast + Epp’s new 4-storey home office building embraces design elegance and curiosity, traits that our firm has become known for.

The office will serve as a “living laboratory” with new ideas and technologies being tested both during construction and throughout the life of the building. With an emphasis on promoting employee wellness and productivity, the building combines the latest in sustainable design strategies as well as taking full advantage of the spectacular mountain views to the north.

The design of our new headquarters is a direct reflection of who we are as engineers, and embodies the notions of integrated systems, prefabrication, and of course, hybrid mass timber – all coming together in harmony for a truly holistic design.

Cross-laminated timber (CLT) will be utilized extensively throughout the building for the floor plates, stair and elevator cores, as well as the demising firewall, while steel columns provide floor and façade support. All panels will be pre-cut and placed in a pre-planned sequence directly from the trailer for speed and ease of construction.
